Real Estate Price Index

Third Quarter - 2017

Introduction:

Real estate industry plays a substantial role in promoting sustainable development in KSA; it is a strategic production factor for all vital sectors. It is also a vital incentive for income-based, job-creating investment, in addition to being a basis for launching investment projects in miscellaneous economic and social fields.

Hence, thorough attention is paid to movements of prices of the constituent units of real estate sector, as well as to the values of real estate transactions carried out throughout the KSA regions. Besides, changes that take place every now and then in this industry are followed up through the Real Estate Price Index Program, established on the basis of the relevant data provided by the Ministry of Justice (MOJ) in a spirit of integration and cooperation among the various governmental bodies to contribute to the sustainable development in KSA.

The Real Estate Price Index defines distinctive real estate statistical indicators that measure the performance of the real estate market in KSA, and bridge the gap of real estate data. Furthermore, it is reckoned an essential tool that helps relevant authorities take sound economic decisions in this regard. The Real Estate Price Index data are especially helpful in the economic and statistical analysis of real estate price movements, and making predictions about real estate trends in the future.

GASTAT is pleased to provide this bulletin to researchers, planners, research centers and entities interested in economic affairs, hoping that the regular and periodic data meet their needs and aspirations.

Allah is the Arbiter of Success.

General Authority for Statistics (GASTAT)

Real Estate Price Index Methodology

Description:

GASTAT provides the Real Estate Price Index data through the MOJ to construct the real estate price index and to track changes taking place in the real estate prices. Given the paramount significance of such data, an integrated system was developed to fulfill all requirements necessary for collecting and auditing data, along with calculating the index.

Objectives:

- Developing sophisticated real estate statistical indicators that measure the performance of the real estate market in KSA.
- Bridging the gap in real estate data.
- Satisfying international, regional and domestic requirements in this regard.

Definition:

Real Estate Price Index is "a statistical tool for measuring the relative change in real estate prices between two points in time."

Data Source:

The data required for calculating the real estate index are provided by the MOJ as the only official reference and source of the data related to the real estate sector in KSA.

Data Nature:

- The MOJ provides GASTAT with the detailed data of the cities which represent all administrative regions as per a number of variables achieving purposes of the calculation of agricultural, commercial and residential real estate index numbers.
- Having obtained primary data of the real estate transactions for the years 2012-2015, GASTAT studied those data through its team of specialists to evaluate them, and verify their adequacy for constructing the real estate index. Accordingly, the following items are determined:
 - The appropriate base year.
 - The level of coverage/ representation.

- Classification.
- Calculation of weights (relative importance).

Coverage:

The real estate index covers all administrative regions of KSA.

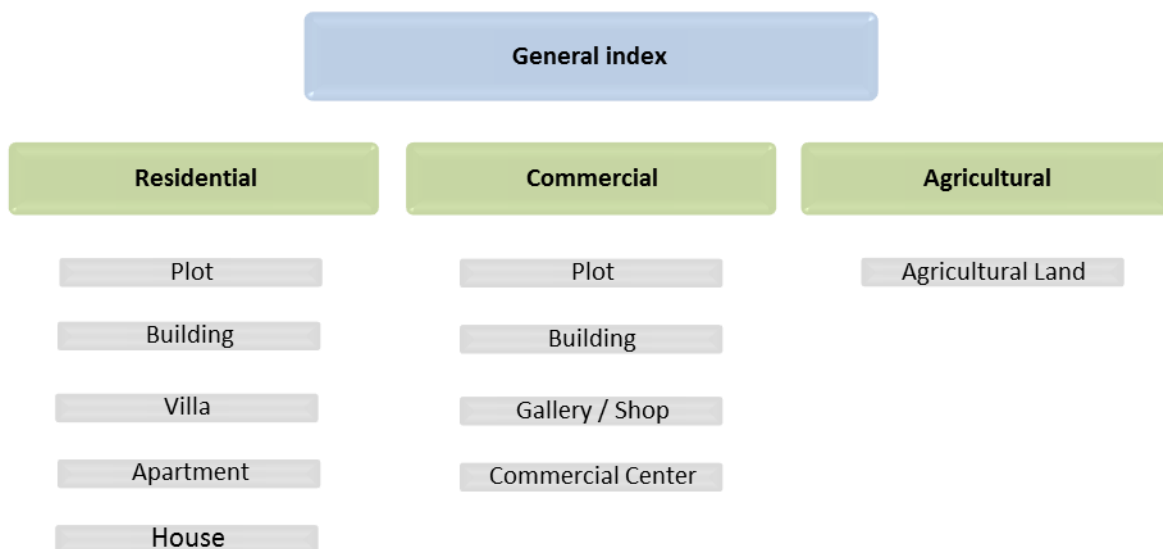

Base Year:

The base year is determined to be 2014.

Classification:

The MOJ data are classified into three main sectors:

- Residential Sector: It includes residential plots, residential buildings, villas, apartments and houses.
- Commercial Sector: It covers commercial plots, commercial buildings, galleries/shops, and malls.
- Agricultural Sector: It is made up of the agrarian lands.

Weights (Relative Importance):

Weights are calculated based on the value of real estate transactions of each sector comprising the index in the course of the base year.

Relative Importance by Sector all over KSA

Reviewing and Verifying Data:

Data are reviewed and verified through the following methodology:

- Making sure that data and prices are logical and inclusive.
- Setting automatic verification rules to be followed during data-entry, auditing, processing and publishing.
- Applying procedures that address the problem of disappearance of prices of some real estate types.

Calculation of Real Estate Price Index:

- Laspeyres equation is used to calculate the real estate index:

$R_{ik} = \prod \left(\frac{P_1}{P_0} \right)^{wt}$	<i>wt</i>	Relative importance	<i>i</i>	District
	<i>P₁</i>	Current price	<i>k</i>	Real estate type
	<i>P₀</i>	Base year price		

How to make use of Real Estate Price Index results?

Real Estate Price Index data are used in many fields, including:

- Monitoring price movements of real estate assets;
- Assisting the relevant authorities in taking sound economic decisions;
- Measuring changes in real estate prices from time to time; and
- Using the Real Estate Price Index data to make the economic and statistical analysis of real estate price movements, and come up with predictions about real estate trends in the future.
- It is used as a main economic indicator to predict the economic growth.

Publishing:

Real Estate Price Index data are published as follows:

- Results of the Real Estate Price Index are published as per specific dates declared at the GASTAT website.
- The GASTAT website www.stats.gov.sa is regarded as the accredited official publishing platform.
- Results of the Real Estate Price Index are published by contacting media, and through social networks.

Main Features of Real Estate Price Index Movements in Q.3 - 2017

First: Quarterly Change:

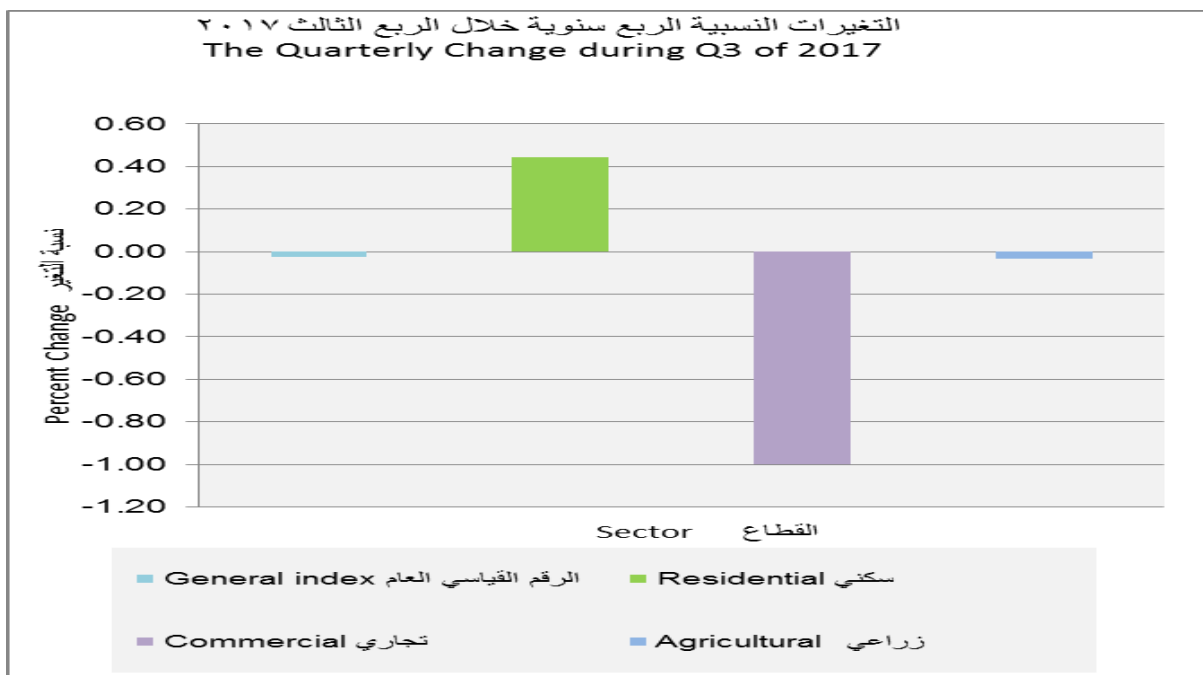

Real Estate Price Index for Q3 of 2017, compared to Q2 of 2017, there is no any change. due to changes that took place in the constituting sectors of the index as follows:

Decrease Percentage

Sector	Percentage (%)	Key items	
		Item	Percentage
Commercial	-1.0	Plot	-1.0

Increase Percentage

Sector	Percentage (%)	Key items	
		Item	Percentage
Residential	0.4	Plot	0.5

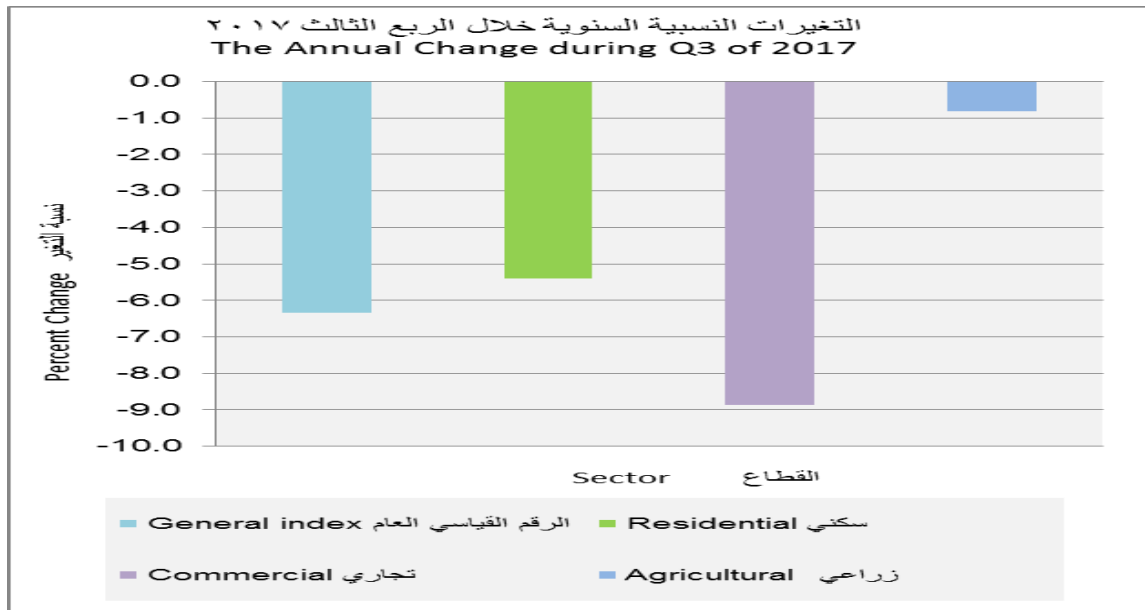

Second: Annual change:

Real Estate Price Index for Q3 of 2017, compared to Q3 of 2016, declined by (6.3%) due to changes that took place in the constituting sectors of the index as follows:

Decrease Percentage

Sector	Percentage (%)	Key items	
		Item	Percentage
Residential	-5.4	Plot	-5.4
		Building	-4.2
		Villa	-0.4
		Apartment	-7.3
		House	-1.9
Commercial	-8.9	Plot	-8.9
		Gallery / Shop	-6.0
Agricultural	-0.8	Agricultural Land	-0.8
