key indicators of labour market	24

Index of Tables

Tables	No. Page
Main indicators of the labor market	24
Total Employed persons by Sex, Nationality and Adopted regulations	25
Total Employed persons by Sex, Nationality and Type of sector	26
Employees on the job Subject to the rules and regulations of the Civil Service by sex and nationality for 2019 Q3 Compared to 2019 Q2	26
Participants on the job Subject to the rules and regulations of social insurance by sex and nationality for 2019 Q3 Compared to 2019 Q2	27
Non - Saudi domestic workers by sex for 2019 Q3 Compared to 2019 Q2	27
Total Employed persons for 2019 Q3 Compared to 2019 Q2	27
Total Employed persons by Sex, Nationality and Age group*	31
Total Employed persons by Sex, Nationality and Administrative Region*	32
Employees by sex, nationality and economic activities	34
Employees on the job Subject to the rules and regulations of the Civil Service by Sex, Nationality and Administrative Region	35
Employees on the job Subject to the rules and regulations of the Civil Service by Sex, Nationality and Age group	36
Employees on the job Subject to the rules and regulations of the Civil Service by sex, nationality and educational level	37
Participants on the job Subject to the rules and regulations of social insurance by sex , nationality and Secto	39
Participants on the job Subject to the rules and regulations of social insurance by Sex, Nationality and Administrative Region	39
Participants on the job Subject to the rules and regulations of social insurance by Sex, Nationality and Age group	40
Participants on the job Subject to the rules and regulations of social insurance by sex, nationality and main groups of occupations	41
Participants on the job Subject to the rules and regulations of social insurance by administrative region and main groups of occupation	44

Participants on the job Subject to the rules and regulations of social insurance by Age group and main groups of economic activities	45
Participants on the job Subject to the rules and regulations of social insurance by sex, nationality and main groups of economic Activities	
Participants on the job Subject to the rules and regulations of social insurance by sex, nationality and main groups of economic Activities	46
Participants on the job Subject to the rules and regulations of social insurance by administrative region and main groups of economic activities	48
Participants on the job Subject to the rules and regulations of social insurance by Age group and main groups of economic activities	49
New Participants on 2019 Q3 Compared to 2019 Q2 to the rules and regulations of social insurance by sex, nationality	50
New Participants on Q3-2019 to the rules and regulations of social insurance by sex, nationality and age group	50
New Participants on Q3-2019 to the rules and regulations of social insurance by sex, nationality and main groups of occupations	51
Suspended Participants on 2019 Q3 Compared to 2019 Q2 to the rules and regulations of social insurance	52
Suspended Participants on Q3- 2019 to the rules and regulations of social insurance by sex, nationality and the reason for discontinuation	53
Non - Saudi domestic workers by sex and main groups of household occupations	54
Total work visas issued by sex and type of sector (visa)	55
Total Employment Rate of Population (15 +) by Sex and Nationality (%)	55
Saudi Employment Rate (15 +) for 2019 Q3 Compared to 2019 Q2(%)	56
Average Usual Hours of Work for Employed Persons (15 +) by Sex for 2019 Q3 (Hour) Compared to 2019 Q2 (Hour)	56
Average Monthly Wages per Paid employee (15 +) by Sex and Nationality (SR)	57
Average Monthly Wages per Paid employee (15 +) by Sex, Nationality and Type of sector (SR)	58
Average Monthly Wages per Paid employee (15 +) by Sex, and Educational level Nationality (SR)	58
Average Monthly Wages per Paid employee (15 +) by Sex, and Age groups Nationality (SR)	59

Total Economic participation rate of Population (15 +) by Sex and Nationality (%)	60
Saudi Economic participation rate (15 +) for 2019 Q3 Compared to 2019 Q2(%)	60
Percentage distribution of labour force Persons (15 +) by Sex, Nationality and Age Groups (%)	61
Percentage distribution of labour force Persons (15 +) by Sex, Nationality and Educational Level (%)	62
Total Economic participation rate of Population (15 +) by Sex and Nationalit(%)	64
Saudi Economic participation rate (15 +) for 2019 Q3 Compared to 2019 Q2(%)	64
Saudi Economic participation rate (15 +) by Sex and Age Group (%)	66
Saudi Economic participation rate (15 +) by Sex and Education level	67
Saudi Job Seekers by Sex	68
Saudi Job Seekers for 2019 Q3 Compared to 2019 Q2	69
Saudi Job Seekers by Sex and Age Group	70
Saudi Job Seekers Sex, Nationality and Educational Level	71
Percentage distribution of Unemployed Persons (15 +) by Sex and Nationality (%)	72
Percentage distribution of Unemployed Persons (15+) for 2019 Q3 Compared to 2019 Q2 (%)	73
Percentage distribution of Unemployed Persons (15+) by Sex, Nationality and Age Groups(%)	74
Percentage distribution of Unemployed Persons (15 +) by Sex, Nationality and Educational Level (%)	76
Percentage distribution of Saudi Unemployed Persons (15 +) Holders of secondary education or equivalent by Sex and Educational Specialization (%)	78
Percentage distribution of Unemployed Persons (15 +) Holders of diploma or higher by Sex and Educational Specialization (%)	79
Saudi Unemployed Persons (15 +) by Sex and Previous work experience (%)	80
Percentage distribution of Saudi Unemployed have previously worked (15 +) by Sex and Reasons of Previous Work Leave (%)	81

Percentage distribution of Saudi Unemployed Persons (15 +) by Sex and Duration of job searching (%)	83
Percentage distribution of Saudi Unemployed Persons (15 +) by Sex and Training (%)	84
Percentage distribution of Saudi Unemployed already trained (15 +) by Sex and Training Type (%)	84
Percentage distribution of Saudi Unemployed already trained (15 +) by Sex and Financing agency for the training program (%)	86
Total Unemployment Rate of Population (15 +) by Sex and Nationality (%)	86
Total Unemployment Rate (15 +) for 2019 Q3 Compared to 2018 Q2(%)	87
Total Unemployment Rate (15 +) Sex, Nationality and Age Group (%)	88
Total Unemployment Rate (15 +) by S Sex, Nationality and Education level	89
Total Unemployment Rate (15 +) by Sex, Nationality and Administrative Region (%)	90

Index of Figures

Figure	No. Page
Total Employed persons for 2019 Q3 Compared to 2019 Q2	28
Percentage Distribution of Total Employed Persons by Sex and Nationality (%)	28
Percentage Distribution of Total Employed Persons by Adopted regulations (%)	29
Employed persons Subject to the rules and regulations of Civil Service and social insurance by Sex and Age group	30
Saudi Employed persons by Administrative Region**	33
Percentage distribution of Saudi Employees on the job Subject to the rules and regulations of the Civil Service by educational level(%)	38
Saudi Participants on the job Subject to the rules and regulations of social insurance by main groups of occupations	42
Percentage Distribution of Saudi Participants on the job Subject to the rules and regulations of social insurance by main groups of occupations (%)	43
Participants on the job Subject to the rules and regulations of social insurance by main groups of economic activities	47
Percentage distribution of Non - Saudi domestic workers by main groups of household occupations(%)	54
Employment Rate of Population (15 +) in 10 years (2010 - 2019Q3)	56
Saudi (15 +) in the labor force for 2019 Q3 Compared to 2019 Q2 (%)	61
Percentage distribution Saudi (15 +) in the labour force by Sex and Age Group (%)	62
Percentage distribution of Saudis (15 +) in the labour force by Education level (%)	63
Saudi Economic participation rate (15 +) for 2019 Q3 Compared to 2019 Q2(%)	65
Total Economic participation rate (15 +) in 10 years (2010- 2019Q3) (%)	65
Saudi Economic participation rate (15 +) by Sex and Age Group (%)	67
Saudi Job Seekers by Sex	68
Saudi Job Seekers for 2019 Q3 Compared to 2019 Q2	69

Saudi Job Seekers by Sex and Age Group	70
Percentage distribution of Saudi Job Seekers by Education level (%)	72
Percentage distribution of Saudi Unemployed Persons (15 +) for 2019 Q3 Compared to 2019 Q2 (%)	74
Percentage distribution of Saudi Unemployed Persons (15 +) by Sex and Age Group (%)	75
Percentage distribution of Saudi unemployed Persons (15 +) by Education level (%)	76
Percentage distribution of Saudi unemployed already trained (15 +) by Sex and Previous work experience (%)	80
Saudi Unemployed Persons (15 +) by Duration of job searching (months) (%)	83
Percentage distribution of Saudi unemployed already trained (15 +) by Training Type(%)	85
Saudi Unemployment Rate (15 +) for 2019 Q3 Compared to 2019 Q2(%)	87
Total Unemployment Rate (15 +) in 10 years (2009 – 2019Q3) (%)	87
Saudi Unemployment Rate (15 +) by Sex and Age Group (%)	88
Saudi Unemployment Rate (15 +) by Education level (%)	89

Introduction

The Labour Market Bulletin is one of the significant statistical products conducted by GASTAT quarterly. It collects its data from two main sources: first: the field survey (Labour Force Survey), and second: administrative records' data of (Ministry of Labour and Social Development, Ministry of Civil Service, General Organization of Social Insurances, and Human Resources Development Fund) in addition to the National Information Center. This bulletin, along with the other statistical products of GASTAT, contribute in supporting decision makers and policy planners, including the statistics of workers and jobseekers according to many variables such as nationality, sex, age groups, and educational level. In addition to the main indicators that are extracted from the estimates of Labour Force Survey such as the unemployment rates, economic participation rate, employment rate, and others.

The Labour Market Bulletin is an extension of the Labour Force Survey report, which was launched in 1999 and continued as an annual issue until 2007. It was converted into a semi-annual report, and then became a quarterly report starting from the second quarter of 2016. In the fourth quarter of 2016, it has been developed to be a bulletin that collects survey results from the administrative records of concerned entities under the name (Labour Market Bulletin).

This bulletin is important as it provides comprehensive statistics on Saudi labour market . It contributes also in building a statistical database for the labour market that helps in preparing and planning future developmental, social, and economic programs in Saudi Arabia.

GASTAT would like to thank all partners and clients from the labour market entities and the heads of households who participated in the study. It is worth mentioning that their cooperation, after the guidance of Allah, had a great impact on issuing this bulletin. Meanwhile, everyone is welcome to send his/her suggestion and proposals to (info@stats.gov.sa). Such suggestions will improve the content of this bulletin and further develop future bulletins.

General Authority for Statistics

Methodology:

1. Data sources of Labour Market Bulletin:

Labour Market Bulletin's data are based on two main sources in order to provide comprehensive information on Saudi labour market. They include statistics from the household field survey (Labour Force Survey) which GASTAT conducts quarterly. They also include quarterly data from administrative records of related governmental entities. Therefore, GASTAT can calculate its indicators and release them along with the field survey indicators within the Labour Market Bulletin.

1.1. First source: Labour Force Survey:

It is a household field survey conducted by GASTAT under the (social statistics) category. Information is collected by visiting a sample of households from all administrative regions of Saudi Arabia. In addition to completing an electronic questionnaire that includes a number of questions. This survey provides estimates and indicators of population' labour force (15 years and above) who live in Saudi Arabia. Moreover, it includes estimates of economically active and inactive population (inside labour force and outside it), and key indicators of labour market such as employment and unemployment rates and others.

1.2. Second source: Administrative records:

Recorded and updated data and information of governmental entities that are related to labour market. These data are resulted from the official electronic registration and documentation operations of these entities. Ministry of Labour and Social Development, Ministry of Civil Services, Human Resources Development Fund, General Organization of Social Insurances, and the National Information Center periodically provide GASTAT with their recorded data through the electronic linkage, as these entities are considered key references of workers' data in both the public and private sectors, in addition to the data of job seekers in Saudi Arabia.

The following table shows the type of data provided by each entity from the labour market bulletin sources:

Data source	Entity	Data and indicators
Household field survey	General Authority for Statistics	Estimates of labour force, unemployed individuals, and indicators of labour force
Administrative records	Ministry of Labour and Social Development	Private sector visas
	Ministry of Civil Service	Government sector' workers and job seekers (JAdara and Sa'ed programs)
	General Organization of Social Insurances	Government and private sectors' workers
	National Information Center	Data of job seekers in the public and private sectors from the data of (Jadara and Sa'ed) in the Ministry of Civil Service at (Taqat) portal of the HRDF, the government sector and individuals' visas, and the numbers of domestic workers.

2. Objectives:

- 2.1. supporting decision and policy makers, researchers, and those who are interested in getting up-to-date and comprehensive statistics related to the labour market in Saudi Arabia.
- 2.2. Empowering the government and private sectors to investigate the labour market changes and get use of them.
- 2.3. Providing the academic sectors with the requirements of social and economic studies and research.
- 2.4. Providing up-to-date statistics on:
 - Unemployment rate according to many variables.
 - Unemployed individuals and labour force according to many variables.
 - Job seekers according to many variables.
 - Workers according to many variables.
 - Employment, economic participation, and economic dependency rates.
 - Average wages and average working hours.
 - Job seeking method, period of unemployment, and previous work and training experiences.

3. Terminologies and concepts related to Labour Market Bulletin:

3.1. Terminologies and concepts related to Labour Force Survey (First source):

3.1.1. Survey' statistical framework

Comprehensive manual of all statistical community units. It relies on Census 2010, and has been updated in quarter 1 of 2018.

3.1.2. Survey sample

A selected sample from the statistical framework in order to conduct Labour Force Survey. This sample includes all household members who share the same dwelling including domestic workers and the like.

3.1.3. Household

A person or a group of individuals - with or without kinship binding them to one another - who share residence during the enumeration. The household includes:

1. Saudi individuals who usually live with the household but they were absent while the survey was conducted for being temporarily away (abroad or in the kingdom). For example: businessmen, tourists, people who are traveling for medication, students on scholarship beyond the borders of the kingdom.
2. Individuals who usually live with the household but have been absent while the survey was conducted for taking night shifts, such as guards, physicians, nurses, airport staff and fishers.
3. Domestic workers such as servants, drivers and the like who living with the same household

3.1.4. Head of household

It refers to the person regarded by the household members as its chief member. Usually, s/he is responsible for undertaking the responsibility of the household and his/her age must not be under (15) years old. If the household consists of children and their mother, and they are cared for by a relative who does not live with them, such a relative shall not be deemed as the head of the household, nor shall s/he be recorded as one of its members, since s/he shall be recorded with his/her own household. In this case, the mother shall be deemed as the head of the household.

3.1.5. Main occupation

The main type of occupation practiced by the worker during the reference time

3.1.6. Economic activity

All activities performed or services provided by the establishment in return for consideration. Sometimes, the establishment gets nothing in return, such as charities that are financed by donations.

3.1.7. outside the labour force

Population (15 years and above) who are not classified under the labour forces (unemployed) because they do not work, do not seek a job, unable to work, or are not ready to work during the survey reference period. For example: Students, housewives, pensioners who do not work, individuals who are unable to work, individuals who do not want to work and those who do not seek any job for other reasons

3.1.8. Labour force

All individuals, males or females, (15 years and above) who are ready to collaborate in the production of commodities and services during the period of the survey time reference. They include the employed and unemployed job seeking population .

3.1.9. Unemployed individuals

They are the individuals (15 years and above) who, during the reference period:

1. They were workless during the week preceding the household visit;
2. They seriously looked for work during the four weeks preceding the household visit (followed at least one method to find a job). Included under this category are those who did not search for work during the four weeks preceding the family visit because of waiting to get work or set up their own business during the coming period, given that they already have searched for work before the fixed time.
3. People who were able to work and ready to join it when available (i.e., ready for work) during the week preceding the household visit.

3.1.10. Previously trained unemployed individuals

Unemployed individuals (15 years and above) who have taken a training course during the time reference (the last 12 months before the survey).

3.1.11. Unemployed individuals who have been working

Unemployed individuals (15 years and above) who had been working then left their jobs for any reason, and during the time reference were: unemployed, seriously seeking a job and ready to get one if any available.

3.1.12. Type of sector: A sector is the entity for which the employed person has been working , it is divided into:

- 1. Governmental:** All governmental bodies such as, ministries, authorities, agencies, municipalities, schools, universities, institutes, governmental hospitals, military sectors, general authorities governmental banks (such as Social development Bank and Saudi Arabian Agricultural Bank), as well as development funds. In addition, it includes the establishments that provide goods or services which their capital is owned and supervised by the state such as (Saudi Airlines, Saudi Railways Organization, and Saudi Aramco).
- 2. Private establishments Sector:** Establishments which produce goods or services, have fixed location and legal personality, are owned by one or a group of individuals such as (private companies, malls, private schools and hospitals, as well as commercial banks).
- 3. Self- employed individuals:** Individuals who provide goods and services personally or in cooperation with a group of individuals outside the establishment. They do not have a fixed location such as street vendors, and individuals who deliver goods personally as they do not belong to private companies.
- 4. Family sector:** Includes productive households who work at home for a wage or (money or in-kind) profit.
- 5. Non-Profit Organizations Sector:** Non-governmental non-profit organizations and authorities which provide the community with goods or services for free or at a nominal price, such as charities and vocational authorities.
- 6. Domestic Workers Sector:** Individuals who provide a household with services for a salary and live with it, such as the female domestic worker, driver, gardener, and building guard who lives with in the household.
- 7. Sector of regional and international organizations and institutions.**
- 8. Other unclassified organizations.**

3.1.1. Indicators definitions:

Indicator	Definition
Economic participation rate	It is an indicator that measures the participation of the working-age population (15 years and over) in the labour force as employed or unemployed individual, which is the ratio of the labour force to the population aged 15 and over.
Employment rate	It is an indicator that measures the participation of the working-age population (15 years and over) in the labour force as employed individuals, which is the ratio of the labour force to employed individuals
Unemployment rate	It is an indicator that measures the participation of the working-age population (15 years and over) in the labour force as unemployed individuals, which is the ratio of the labour force to unemployed individuals
Average weekly working hours	measures the average weekly working hours of workers (15 years and over), which is the total number of working hours to the total number of workers.
Average monthly wage per paid workers	An indicator that measures the average monthly salary of the employed individuals with paid jobs (15 years and above), i.e. total salary to total employed individuals with paid jobs.

GASTAT relied on the approved formulas of the UN international standards that are compiled with the international labour organization ILO. Therefore, the indicators are calculated as follows:

Indicator	Calculation Formula
Labour force	= (number of employed individuals + number of unemployed individuals)
Unemployment rate	= (number of unemployed individuals ÷ total labour force) x 100
Unemployment rate for males	= (number of unemployed males ÷ total labour force of males) x 100
Unemployment rate for females	= (number of unemployed females ÷ total labour force of females) x 100
Employment rate	= (number of employed individuals ÷ total labour force) x 100
Employment rate for males	= (number of employed males ÷ total male labour force) x 100

Employment rate for females	= (number of employed females ÷ total female labour force) x 100
Economic dependency rate	=(Total population – Labour force) ÷ Labour force x 100
Economic participation rate	= (total labour force ÷ total population of working- age (15 years and above)) x 100
Economic participation rate of males	=(total male labour force ÷ total male population of working-age (15 years and above)) x100
Economic participation of females	=(total female labour force ÷ total female population of working-age (15 years and above)) x100

Note: number of workers and number of unemployed individuals are only estimated data from the Labour Force Survey

Based on the international standards that Saudi Arabia is committed to, and applied to the G-20 countries:

- Indicators of economic participation rate, employment rate, unemployment rate, average weekly working hours, and average monthly wages of workers are all based on the estimates of (the Labour Force Survey), which is a field survey conducted by GASTAT through visiting households to complete the survey's questionnaire.
- Data of workers from administrative records have several indicators for labour market, but they are not used statistically to measure employment, unemployment, or economic participation rates..
- Commitment to these standards will facilitate international comparisons between countries in labour market indicators.

3.2. Concepts related to administrative records at governmental entities (Second source):

3.2.1. Workers (based on the administrative records): All working individuals subjected to approved regulations and laws from the regulatory entities of labour market and are registered in the administrative records. On the other hand, workers can be classified in the administrative records based on the regulations and laws they are subjected to as follows:

- Saudi workers subjected to the laws and regulations of the civil services and working at all governmental institutions and bodies, in other words, workers who hold jobs that are considered within the general budget of the country, also subjected to the civil retirement system (males or females) workers, as well as non-Saudis contractors who fill these positions in accordance the regulations of non-Saudis employment.
- Workers according to the laws and regulations of the social insurance system as well as labour system, which includes Saudis and non-Saudis
- Domestic workers: non-Saudis workers from both sexes who work in houses, including servants, cleaners, cooks, waiters, drivers, guards, nurses, and private teachers.

Data of workers in Labour Market Bulletin which were derived from administrative records do not include the following categories:

1. Workers of military and security sectors
2. Workers who are not registered in the civil service and social insurance records, which include:
 - Saudis working for their own businesses and are not subjected to the labour regulations, also, not registered in social insurance, such as: those who work in delivery through electronic apps
 - Saudi employers who work in establishments and not registered in the social insurance
 - Non-Saudi staff working in foreign international, political or military missions
 - Non-Saudi workers who come to the Kingdom for work that normally takes less than three months to be completed.

3.2.2. Job seekers (based on administrative records):

Saudi individuals registered in job searching programs of the Ministry of Civil Service (Jdarah and Saed) as well as Human Resource Development Fund (Taqat). They register their personal data, qualifications, experiences, and CVs through an electronic system. In fact, job seekers in the administrative records do not subject to the internationally recognized unemployment conditions and standards adopted by the International Labour Organization ILO, therefore, they are not unemployed individuals; since not every job seeker is considered unemployed individual. Individuals must meet all the unemployment conditions to be considered as an unemployed individual, which are:

1. The individual must be with no job during the seven days preceding the household visit
2. If the individual was looking for a job during the four weeks preceding the household visit

3. The individual must be able to work and ready to start when the job is available during the seven days preceding the household visit or the next two weeks (i.e. available to start working)

Data of job seekers from the administrative records – based on global practices of labour market indicators – have several indications, but are not used statistically to measure unemployment rates

4. Coverage:

4.1. Spatial coverage:

The labour market statistics covers the statistics related to the labour market across all administrative regions in Saudi Arabia, which are 13 regions. The Labour Force Survey (the first source of the bulletin) covers the following regions: (Riyadh, Makkah, Madinah, Qassim, Eastern Region, Asir, Tabuk, Hail, Northern Borders, Jazan, Najran, Al-Baha and Al-Jouf). This is done through the visit of a sample of households from each region, which are chosen by a scientific method in order to be a sample representing the households of the region. However, the administrative records data (the second source of the bulletin), include the entire Saudi Arabia's population whose data is documented in the records of relevant government entities.

4.2. Temporal coverage:

The labour force survey data (the first source of the bulletin) is based on the number of household members, their demographic, social and economic characteristics, as follows:

- 1) Data on the number of household members and their demographic characteristics is based on the date of the household visit and inspection.
- 2) Data of workers is based on the seven days prior to the household visit and inspection.
- 3) Data of job seekers is based on the four weeks prior to the household visit and inspection, which means the last full four weeks preceding the household visit (from Sunday of the first week to the Saturday of the last week).
- 4) Data of employment availability is based on the seven days prior to the visit, or the following two weeks (the two weeks following the date of the visit, from Sunday of the first week to Saturday of the second week).
- 5) Data of enrollment in training programs is based on the seven days prior to the household visit for young people aged (15-24 years).
- 6) Data on receiving training programs is based on the previous 12 months (the last twelve months prior to the survey month).

The data from administrative records (the second source of the bulletin) is based on the last day of the Gregorian quarter of each year.

5. Used statistical classifications:

The bulletin's data depends on the following classifications:

- The National Classification of the Economic Activities (ISIC4)
- Saudi classification of professions which is based on the international classification (ISCO)
- Saudi classification for majors and educational levels which is based on the international classification (ISCED)
- National guide for countries and nationalities which is based on the international standard (ISO 3166) Country codes.

6. Sample selection:

The sample is selected by identifying (33.500) households as a chosen sample to represent the survey community kingdom-wide, distributed according to the administrative regions as follows:

Administrtrative region	Number of households	Administrtrative region	Number of households	Administrtrative region	Number of households
Riyadh	5,175	Asir	2,250	Najran	1,600
Makkah	6,050	Tabuk	1,825	Al-Baha	1,500
Madinah	2,300	Hail	1,625	Al-Jouf	1,650
Qassim	1,650	Northern Borders	1,750		
Eastern Region	4,200	Jazan	1,775		

Sampling units in the Labour Force Survey:

The primary sampling unit is the enumeration areas. They are sampling units that were taken during the first stage of the sample design. However, (households) are the secondary and final sampling units. They are sampling units that were taken during the second stage of the sample design, and each secondary sampling unit is considered a part of the primary sampling unit.

7. Data collection tools:

- Questionnaires of field data collection (first source of the bulletin): the survey's questionnaire was prepared and designed by labour force survey specialists in the General Authority for Statistics (GASTAT). When designing the questionnaire, the international recommendations and standards issued by the International Labour Organization (ILO) in the field of labour force surveys were taken into consideration. The questionnaire was presented

to the ILO experts during their visit to the Authority and to the relevant bodies as well to consider their feedback and observations. The questions were formed in a specified scientific way in order to unify them among researchers.

The questionnaire was divided into five sections based on the topic to increase its efficiency in achieving the technical specifications of the field work stage

Metadata	Characteristics of household members (all household members)	Economic data of individuals (15 years and above)	Job seeking and availability to work (unemployed individuals 15 years and above)	Results of the visit
----------	--	---	--	----------------------

The full version of the questionnaire can be viewed and downloaded via the official website of GASTAT

https://www.stats.gov.sa/sites/default/files/stmr_lqw_lml_rby.pdf

The questionnaire has been transformed into an electronic version that can be reached through the tablet-based data collection system, which allows:

Reviewing the field researcher work zone (survey sample)

Reaching to the sample (household) by using the map in the tablet

Completing the data by using data auditing and navigation rules (to discover errors of inputs and non-logical inputs when completing the data)

Communication between the supervisory categories is through sending and receiving the notes with the field researcher

- The administrative records data (the second source): GASTAT completed the data of the labour market automatically from government entities. The data includes the main data of workers, job seekers and work visas, as follows:
 1. Data from the Ministry of Civil Service: Including data on workers subjected to Civil Service regulations and policies according to a number of variables.
 2. Data from GOSI: Including data related to those who are registered and are working, who are subjected to GOSI's regulations and policies according to a number of variables.
 3. Data from the Ministry of Labour and Social Development: Including data of work visas for the private sector.
 4. Data from the National Information Center: Including data related to job seekers after data harmonization for those who are registered in (Jadara and Hafiz) in the Ministry of Civil Service with the data of those registered in (Taqat) in HRDF, in addition to data related to work visas for government sector, individuals, and the number of domestic workers.

8. Data collection method:

8.1. Data collection in Labour Force Survey (First source):

- Candidates working as field researchers, who visited households to collect data (Labour Force Survey), were selected according to a number of practical and objective criteria related to the nature of work.
- All candidates (GASTAT staff and collaborators from some government entities) have been prepared through special training programs.
- Direct contact with the household in the process of completing the survey questionnaire and data collection: Each field researcher visited the households within the sample of the survey after reaching them using the coordinates in the tablet and the guide maps. He also identified himself and presented the official documents proving his statistical identity. In addition, he explained the purpose of his visit and provided an overview of the survey and its objectives. Furthermore, the researcher filled in the electronic questionnaire orally from head of the household. In the absence of the head of the household, the data was collected from any adult member of the household who knows about household affairs.
- All field researchers used tablets to complete survey questionnaire data based on the time reference specified according to the number of household members and their demographic, social and economic characteristics.
- Field researchers in different regions of the Saudi Arabia used the "synchronization" feature available on tablets to upload and transfer the household data directly to the database associated with it at the head office of GASTAT, where it is stored in a specific format to be reviewed and processed later.
- (Auditing rules) are applied to ensure the consistency, accuracy and logic of the data on the Labour Force Survey questionnaire. This is done through an (electronic bases that detect the discrepancy of answers). These bases were built by linking the logical relationship between the answers of the questionnaire and its variables to help the field researcher to detect any error directly when completing data with the household. These bases will not allow the passing of errors if the answer conflicts with another information or answer in the questionnaire.
- The data collected was verified by reviewing the data through the same field researcher, his inspector and the supervisor of the survey in the supervision area. All work areas were monitored and reviewed by the data quality room at the head office of GASTAT. This room also monitors and controls the performance of all working groups in the field at the time of data collection starting from the first day until the last day.

8.2. Obtaining data from administrative records (Second source):

GASTAT coordinated with the governmental entities concerned with the labour market to obtain data on Labour Market Bulletin. Such data include data of workers, job seekers, and number of visas issued based on data of administrative records. These data are preserved in the databases of GASTAT, and are audited and reviewed according to the scientific statistical method and approved quality criteria in coordination with the source of the data.

9. Preparation and revision of results:

After revising the collected data in the previous steps, all outputs are stored and uploaded to the database after being calculated by GASTAT to be reviewed and processed by specialists in Labour Force Statistics through modern technologies and software designed for this purpose.

10. Data publication:

First: Preparation of Results Designed for Publishing:

During this stage, GASTAT downloaded the data's results from the database of labour force surveys. Moreover, it organized and reviewed the data of administrative records included in the bulletin. Then, the publication tables, Figures of data, indicators, metadata, and methodology were prepared in both languages English and Arabic.

Second: Preparation of Media Kit and Announcement of Publication Date:

The publication date of the bulletin is already set up by GASTAT on its official website at the beginning of the Calendar Year. During this period, the Authority is preparing the media kits to announce the date of releasing the bulletin through media in addition to its various platforms in social networking sites. The bulletin will be published firstly on GASTAT's official website in different formats, such as open data in Excel format to be easily reached for all clients and those who are interested in the labour market in general. It will be uploaded on the website's statistics library as well.

Third: Communication with clients and providing them with the bulletin's results

One of GASTAT's objectives is to better meet its clients' needs, so it immediately provides them with the bulletin's results once the Labour Market Statistics Bulletin is published. It also receives questions and inquiries of the clients about the Bulletin and its results through various communication channels, such as:

- GASTAT's official website www.stats.gov.sa
- GASTAT's official e-mail address info@stats.gov.sa
- Client Support's e-mail address cs@stats.gov.sa
- Official visits to GASTAT's official head office in Riyadh or one of its branches in Saudi Arabia.

- Official letters.
- Statistical help-line 920020081

11. Applied quality procedures:

Labour market statistics are subject to many technical quality procedures to guarantee the quality of data resulted from this survey. These procedures include:

1. Using the assessment of previous surveys to monitor the strengths and weaknesses in the implementation of the survey and improve the procedures of statistical data collection.
2. Training and testing researchers to guarantee data access in a way that conforms with the survey objectives.
3. Testing the electronic tools used to collect data to make sure that data are safe and protected during all survey stages.
4. Reducing the respondent burden by using the proper statistical methods.
5. Comparing the results of the survey or the administrative records to make sure of their accuracy and how they correspond to reality.
6. Using appropriate filtering methods to avoid individuals duplication in the different administrative records sources.
7. Publishing the results on the dates agreed upon.

In addition to a number of procedures performed in GASTAT data quality room during the data collection field operations:

Data quality room:

An operations room that synchronously works with the field works of surveys. It is equipped with electronic monitoring tools and tracking screens used by observers and quality specialists to review the consistency of data and to detect errors and extreme values during the data collection process in the field. This is done by immediately following up what is being filled out by the field researcher. However, this Room is responsible for checking the researchers' commitment to the survey's instructions during the visit, and the correctness and logicity of the data. It also ensures implementation of the visitation plan of households or establishments, and reviews some important indicators of the survey to ensure the data accuracy. The main tasks of the Data Quality Room are:

- Reviewing the collected data and sending notes to the field operating teams of different levels through an automated desktop system that is linked with the tablets of the researchers, so they can access the feedback quickly at their working locations.
- Making phone calls with the households in order to ask some questions of the form to check the accuracy of data completed by the researcher, and his commitment to

the instructions during the visit. Also, to obtain the missing data that have not been received yet, and to thank the households' heads for their cooperation .

- Answering field inquiries received from field researchers or households' heads .
- Checking the form completion location by matching its coordinates with the registered ones in the sample file.

12. Benefits and Beneficiaries:

All governmental sectors that are associated with the developmental work in Saudi Arabia are benefiting from the Labour Market Bulletin. The labour market group which includes (Ministry of Labour and Social Development, Ministry of Civil Service, and General Organization of Social Insurances, and Human Resources Development Fund, Ministry of Economy and Planning, and a number of organizations in the field of economy and planning are key beneficiaries of the Labour Market Bulletin, in addition to international and regional organizations, researchers, and planners. Data and indicators of labour market are significant statistical products that contribute in supporting decision making in this field. The private sector also benefits from this bulletin to develop the human resources sectors and programs that are related to employment and training, and to follow up with the labour market changes accurately.

Results of Labor Market Bulletin for Q3 which ended in September 2019, according to data of administrative records of government entities, showed that the total number of employees reached (12,927,908) individuals, where (10,596,249) individuals were males, with a percentage of (82.0%), and (2,331,659) individuals were females, with (18.0%), out of total employees.

Based on administrative records' results, the total number of Saudi employees was (3,100,812) individuals, where the percentage of males was (65.3%), with (2,023,910) individuals. Whereas, females registered (34.7%) with (1,076,902) individuals.

Taking into consideration that the data of administrative records do not include:

- 1- Workers in military and security sectors
- 2- Workers who are not registered in the records of GOSI and Ministry of Civil Services (such as self-employed workers).

According to the internationally approved international practices, the economic participation rate is calculated based on household surveys' estimates and the general population census. The results of the Labour Market Bulletin showed that the economic participation of total population (15 years and above), derived from the estimates of the Labour Force Survey, reached (58.4%); the percentage was (81.1%) among males and (24.5%) among females. Additionally, Saudi's economic participation rate reached (45.5%), (67.0%) was the percentage among males and (23.2%) was registered for females.
